Limitations :

These are only screening tests. All reactive samples should be confirmed by other supplemental assays or confirmatory test methods. Therefore for a definitive diagnosis, the patient's clinical history, symptomatology as well as serological data should be considered. A non-reactive result does not exclude the possibility of exposure to or infection with the concerned virus. False reactive /positive results or cross reactivity have also been documented in several literatures.

Note : TEST METHOD: IMMUNOCHROMATOGHRAPHY.
IT IS A SCREENING TEST.
