Remark: - A platelet count is a diagnostic test that determines the number of platelets blood. platelets, which are also called thrombocytes, are small disk-shaped blood cell produced in the bone marrow and involved in the process of blood clotting. There are normally between 150,000-450,000 platelets in each microliter of blood. Low platelet counts or abnormally shaped platelets are associated with bleeding disorders. High platelet counts sometimes indicates disorders of the bone marrow.
