### PATHOLOGICAL EXAMINATION REPORT

TEST NAME	OBSERVED VALUE	UNITS	REFERENCE VALUE
-----------	----------------	-------	-----------------

#### IMMUNOLOGY AND SEROLOGY

##### HIV I & II CARD TEST

HIV 1 & 2

Non-Reactive

Immunochromatography test

A negative test means that either patient has not been exposed to HIV or has been tested during the window period. A positive test must be confirmed by Western Blot Test.

##### ANTIBODY TO HEPATITIS 'C' VIRUS ( CARD TEST )

Anti-HCV

Non-Reactive

##### COMMENTS:

The hepatitis C virus HCV is now the cause of 90% post transfusion hepatitis. It is also found in drug addicts and also contributes to sporadic acute viral hepatitis .

##### ADVICE:

Serum Elisa / RT-PCR is mandatory for final confirmation of HCV.

##### HEPATITIS B SURFACE ANTIGEN (HBsAg)

HBsAg

Non-Reactive

##### Interpretation:

HBsAg: Marker of Hepatitis B infection. Presence does not necessarily indicate acute or chronic infection, which is determined by other markers. In hepatitis B degree of liver cell damage and clinical course is determined by patients immune response to HBV rather than by amount of circulating HBsAg.
