BIOCHEMISTRY SERUM ELECTROLYTES

Test Description	Observed Value	Unit	Biological Reference Interval
Sodium	135.5	mEq/L	135 - 150 mEq/L
Potassium	4.29	mEq/L	3.5 - 5.0 mEq/L
Chloride	94.0	mEq/L	98 - 107 mEq/L

NOTES -
Electrolytes are substances that have a natural positive or negative electrical charge when dissolved in water. An adult's body is about 60% water which means nearly every fluid and cell in your body contains electrolytes. They help your body regulate chemical reactions, maintain the balance between fluids inside and outside your cells, and more.
Your body gets electrolytes or their components from what you eat and drink. Your kidneys filter excess electrolytes out of your body and into your urine. You also lose electrolytes when you sweat.

METHOD - YUMIZEN E100.
