### Interpretation ::

## BIOCHEMISTRY

Test Description	Result	Units	Biological Reff Intervals
<b>SERUM CREATININE</b> Creatinine	H 15.2	mq/dL	Male 0.5 - 1.4 Female 0.4 - 1.2

### Interpretation ::

#### Interpretation:

This test is done to see how well your kidneys are working. Creatinine is a chemical waste product of creatine. Creatine is a chemical made by the body and is used to supply energy mainly to muscles.

Higher than normal level may be due to: Renal diseases and insufficiency with decreased glomerular filtration, urinary tract obstruction, reduced renal blood flow including congestive heart failure, shock, and dehydration; rhabdomyolysis can cause elevated serum creatinine.

Lower than normal level may be due to:

Small stature, debilitation, decreased muscle mass; some complex cases of severe hepatic disease can cause low serum creatinine levels. In advanced liver disease, low creatinine may result from decreased hepatic production of creatinine and inadequate dietary protein as well as reduced muscle mass.
