**BIOCHEMISTRY**

**ALKALINE PHOSPHATASE**

SampleType: SERUM

TEST NAME	OBSERVED	BIO. REF. INTERVAL	UNITS
ALKALINE PHOSPHATASE	79	38-126	IU/L

Method: AMP Buffer IFCC

*Clinical Interpretation: Liver, Bone and Placenta contain very high concentration of ALP, therefore increase in ALP activity is usually related to hepatobiliary and bone disorders. Increased ALP level are observed in liver disease, osateomalacia, rickets and bone disorders, moderate elevation are sometimes noted in congestive heart failure, intestinal disease and intraabdominal bacterial infections.*

**INORGANIC PHOSPHATE**

SampleType: SERUM

TEST NAME	OBSERVED	BIO. REF. INTERVAL	UNITS
