HAEMATOLOGY

Test Done	Result	Unit	Normal Value
HAEMOGLOBIN (Hb)			
<i>Sample : EDTA K3</i>			
HAEMOGLOBIN*	↓ 9.5	gm%	13.5 - 17.5
<small>Photometric Measurement</small>			

SEROLOGY

Test Done	Result	Unit	Normal Value
HIV 1 & 2 ANTIBODIES, SCREENING TEST			
<i>Sample : Serum</i>			
HIV 1 & 2 ANTIBODIES	NON-REACTIVE		NON-REACTIVE
<small>Immunodot Assay</small>			

Clinical Significance :

HIV 1 & II (CARD HIV Rapid test) is a qualitative test used to screen for antibodies against HIV 1 and 2 viruses. As per NACO guidelines, all positive samples should be TEST) tested by using 3 different types of kits before report is released.
This is only a screening test. All samples detected reactive by the above screening test must be confirmed by using HIV Western Blot or HIV RNA tests. A non-reactive result does not exclude the possibility of exposure to or infection with HIV or the window period.

HCV RAPID CARD TEST (HEPATITIS C)	NON-REACTIVE		NON-REACTIVE
HEPATITIS B SURFACE ANTIGEN (HBsAg)			
<i>Sample : Serum</i>			
HBSAG (HEPATITIS B VIRUS)	NON-REACTIVE		NON-REACTIVE
<small>Immunochromatography</small>			

Clinical Significance :

Hepatitis B surface antigen (HBsAg) is the first serologic marker appearing in the serum at 6 to 16 weeks following exposure to HBV. In acute infection, HBsAg usually disappears in 1 to 2 months after the onset of symptoms. Persistence of HBsAg for more than 6 months in duration indicates development of either a chronic carrier state or chronic HBV infection.
This is only a Screening test. All reactive samples should be confirmed by confirmatory test.
