SEROLOGY

Test Done	Result	Unit	Normal Value
-----------	--------	------	--------------

HIV 1 & 2 ANTIBODIES, SCREENING TEST

HIV 1 & 2 ANTIBODIES

Immunodot Assay

NON-REACTIVE

NON-REACTIVE

Clinical Significance :

HIV I & II (CARD HIV Rapid test is a qualitative test used to screen for antibodies against HIV 1 and 2 viruses. As per NACO guidelines, all positive samples should be TEST) tested by using 3 different types of kits before report is released. This is only a screening test. All samples detected reactive by the above screening test must be confirmed by using HIV Western Blot or HIV RNA tests. A non-reactive result does not exclude the possibility of exposure to or infection with HIV or the window period.

HCV RAPID CARD TEST (HEPATITIS C)

NON-REACTIVE

NON-REACTIVE

HEPATITIS B SURFACE ANTIGEN (HBsAg)

HBsAg (HEPATITIS B VIRUS)

Immunochromatography

NON-REACTIVE

NON-REACTIVE

Clinical Significance :

Hepatitis B surface antigen (HBsAg) is the first serologic marker appearing in the serum at 6 to 16 weeks following exposure to HBV. In acute infection, HBsAg usually disappears in 1 to 2 months after the onset of symptoms. Persistence of HBsAg for more than 6 months in duration indicates development of either a chronic carrier state or chronic HBV infection. This is only a Screening test. All reactive samples should be confirmed by confirmatory test.
